UM DANDIA™ tooling solutions for the automotive industry

KYOCERA UNIMERCO - YOUR INNOVATIVE PARTNER

KYOCERA UNIMERCO specialises in the manufacture of high performance PCD tooling, designed according to customer requirements. Some of the benefits of working together with us are:

Optimisation support

We do not just deliver tools. Our highly qualified tooling technicians have in-depth knowledge of automotive applications and each problem is analysed thoroughly to come up with the best possible solution for you. In other words, we take complete care of your tool performance and ensure that you get the expected output.

Delivery time

As a rule, we are able to deliver PCD tools in 6-8 weeks. In most cases, we will deliver you a design concept for the PCD tooling solution for review. And of course if you require it, we are able to make in-house tests, based on an hourly payment. The result will be documented in a report for you. Thereby we secure that our tools are delivered "ready-to-use".

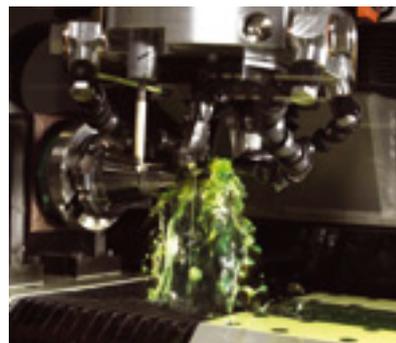

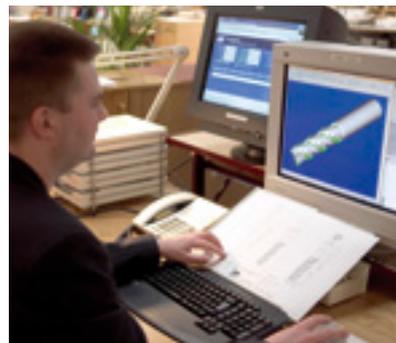

Not only regrinding but RE•NEW®

All tools are developed and manufactured utilizing the latest technology. And we regrind your tools with the same concern that we use to manufacture new tools. Original tool geometries are secured in our RE•NEW® process. We also RE•NEW® other tool brands with very good results - often better than when you received the tool as new.

100% repeatability

Due to a unique internally developed norm system and a very advanced drawing database, we are able to continuously deliver tools with the exact same geometries throughout all future deliveries, regardless in which of our manufacturing facilities your tools are being produced.

We look forward to your inquiry for a customized PCD tooling solution.

UM DANDIA™ PCD TOOLS - CONVERTER HOUSING

We have in-depth knowledge of machining aluminum parts. Our tool package for steering housing components provides you with the following benefits:

One shot tools

The result of extensive research and development activities is the "one shot" solution for many of the features on converter housings. So rather than using traditional drill and ream process, with UM DANDIA™ you can cut to finished size in "one shot". The most important benefit of "one shot" tools is reduced machining time.

Combination tools

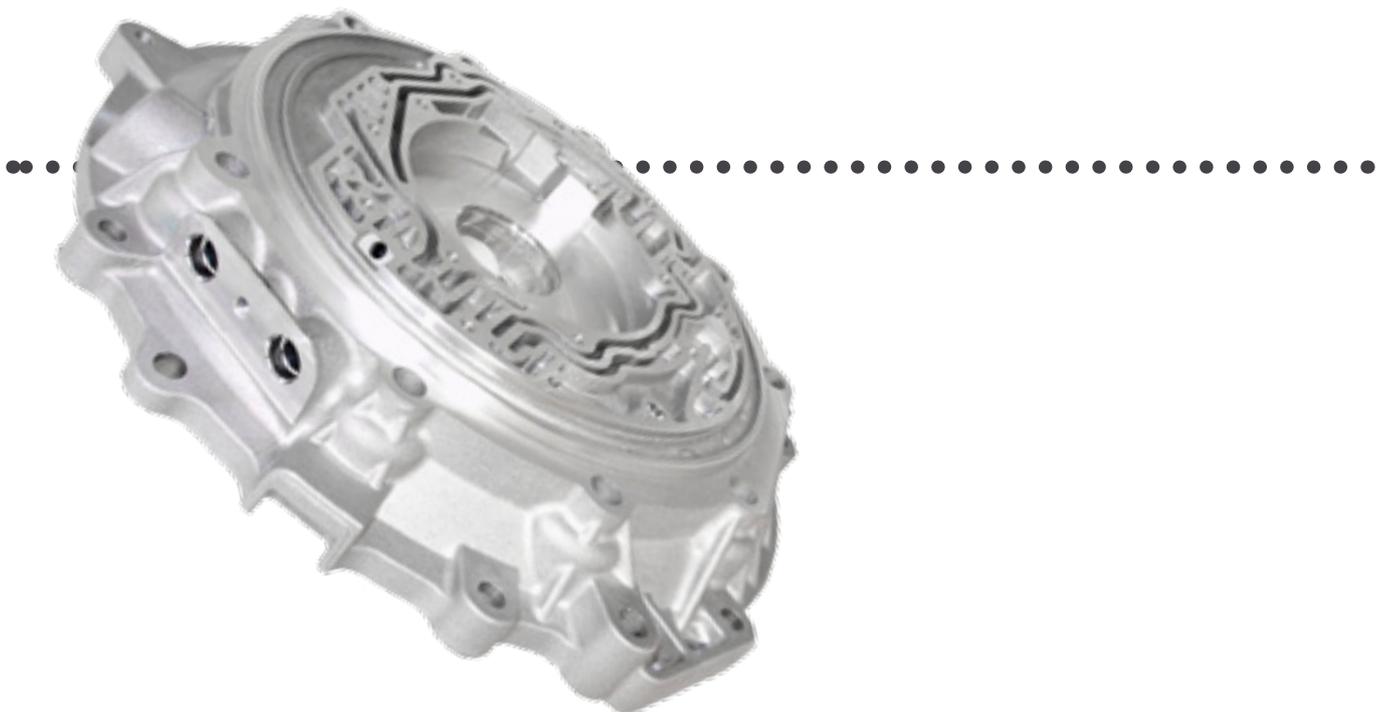

Like with roughing and finishing tools, a number of other tool designs have been developed in order to combine several operations in one tool. This has been possible for many operations – like milling/reaming, reaming/grooving and drilling/reaming.

Fewer tools needed

The combination of our "one shot" and "combination tool" approach has led to a need for much less total tools. In fact, with the tooling solution from KYOCERA UNIMERCO, you may require 25% fewer total tools, compared to our competitors. Less tooling means shorter cycle time and thereby higher productivity.

Surface finish

With UM DANDIA™ tooling, you will be able to achieve excellent surface finish results, great Cp and Cpk values - all with a shorter cycle time. Other benefits are lower coolant cost and a better production environment - all due to the advantages of using tools specifically designed for MQL applications.

CONVERTER HOUSING - TOOL PACKAGE

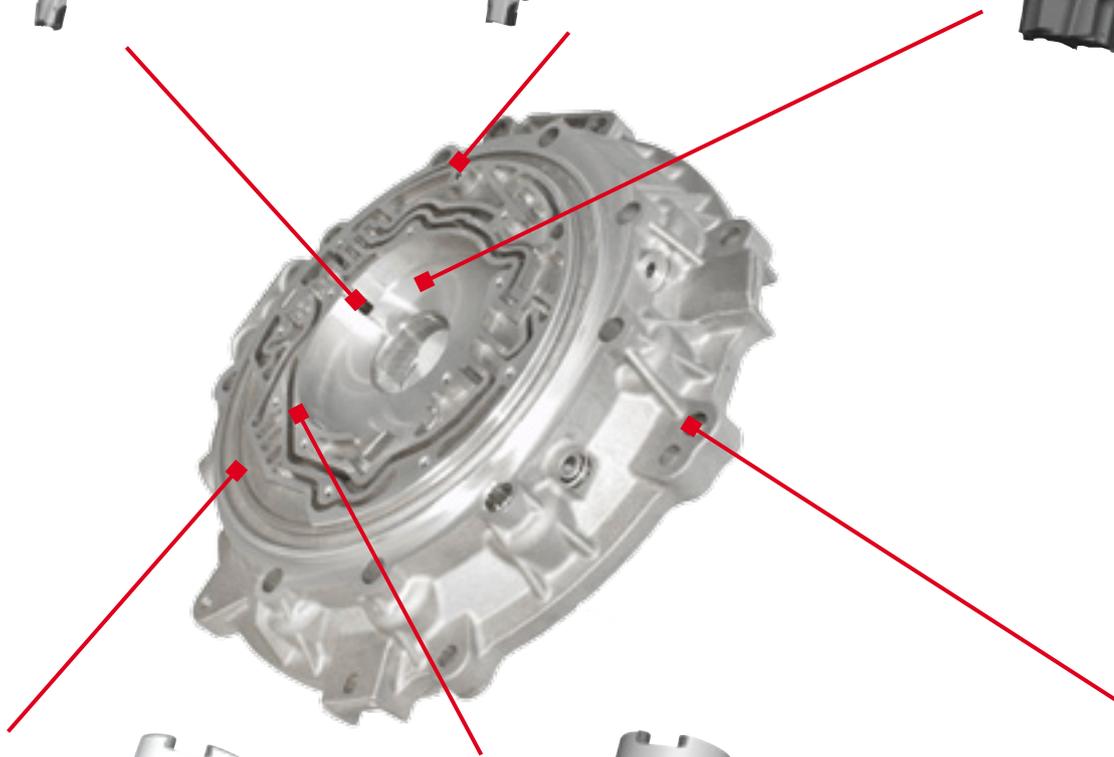

UM PCD HELIREAM

UM PCD STEP REAMER

UM PCD FACE MILLING CUTTER

UM PCD INTERPOLATING
FORM MILL

UM PCD FACE
MILLING CUTTER

UM PCD STEP REAMER

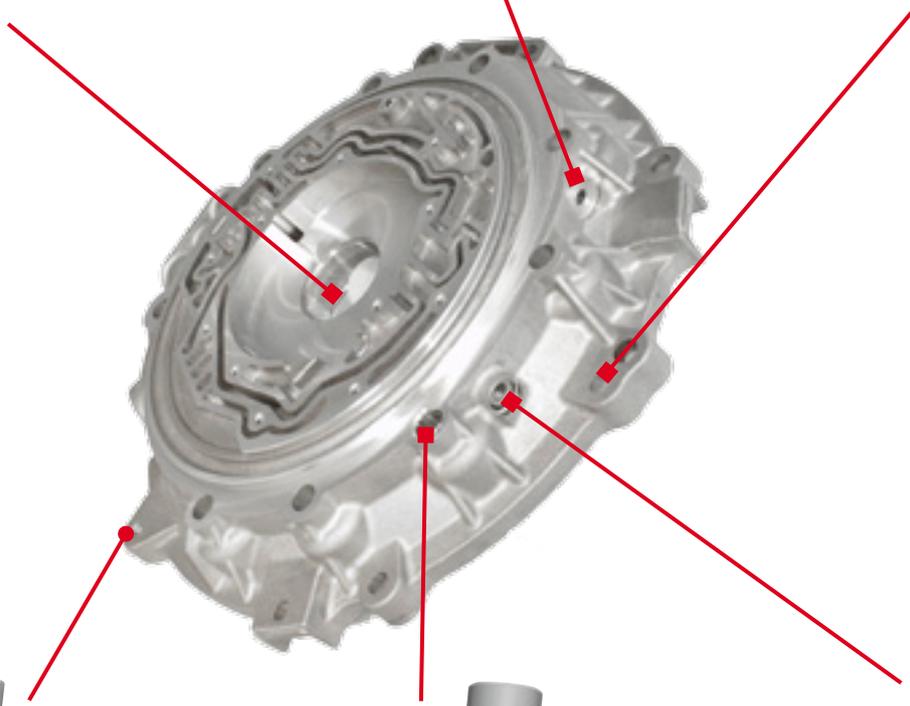

UM PCD STEP REAMER

UM PCD HELIREAM

UM PCD DRILL

UM PCD HELIREAM

UM PCD STEP REAMER

UM PCD HELIREAM

UM PCD FACE MILLING CUTTER

UM PCD ONE SHOT DRILL/REAMER

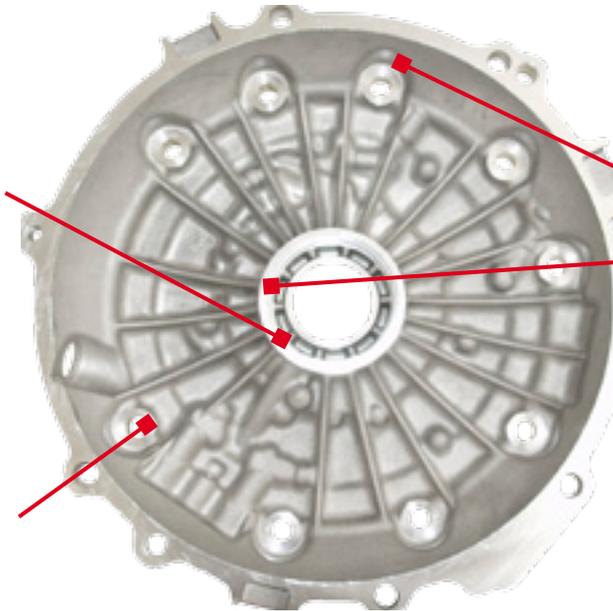

UM PCD STEP REAMER AND GROOVING TOOL

UM PCD FACE MILLING CUTTER

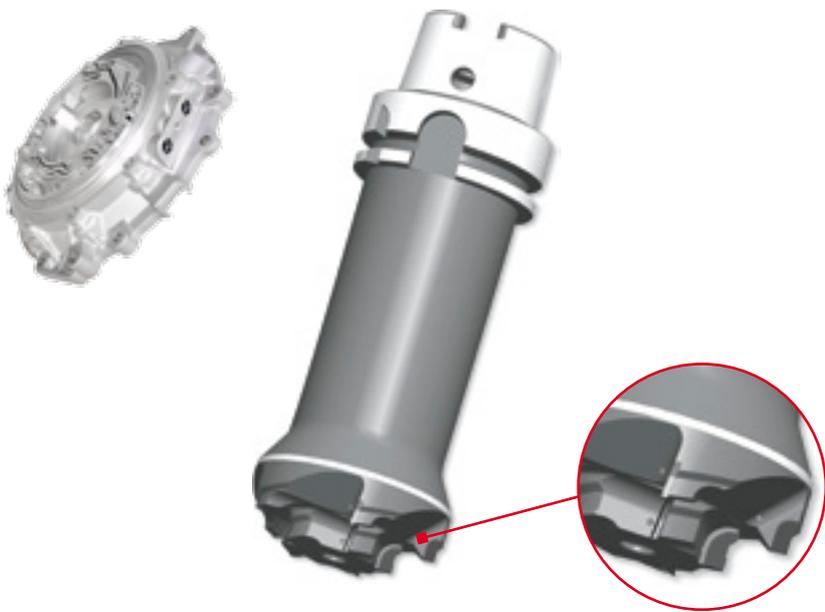

UM PCD STEPREAMER

OPTIMISATION EXAMPLES

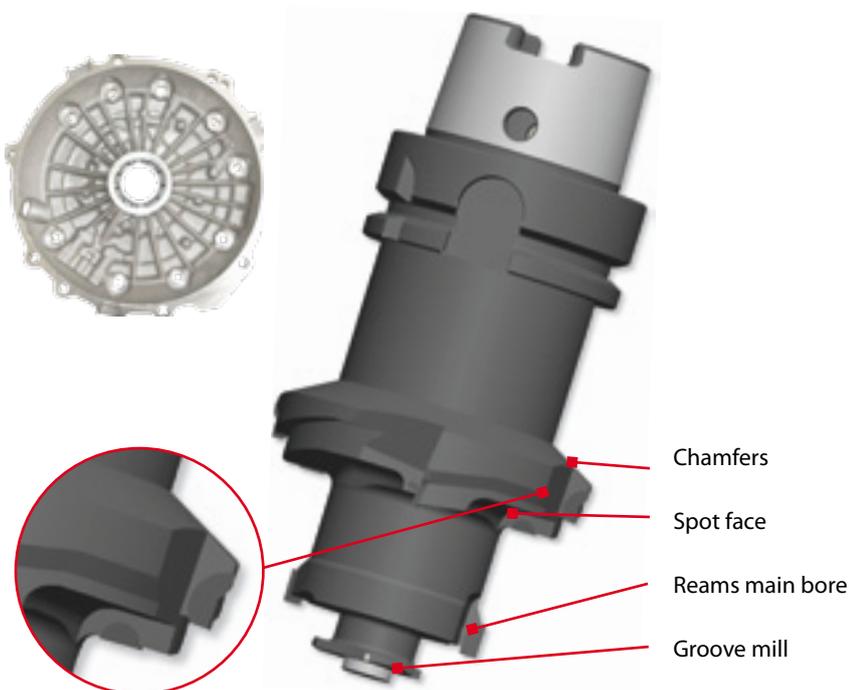

COMBINATION TOOL – SPECIAL INTERPOLATING FORM MILL

FEATURES AND BENEFITS

- › 1 pass interpolating milling of several different faces at once
- › Eliminates 2 tool changes
- › No rough + finish pass
- › Only 1 shot to complete complex form

COMBINATION TOOL – REAM + SPOT FACE + GROOVE

FEATURES AND BENEFITS

- › 1 pass ream, spot face + chamfers – no need for roughing tools
- › Mirror finish in main bore
- › Groove mill interpolates groove after ream operation
- › Eliminates 2 tool changes

KYOCERA UNIMERCO Tooling Ltd.

KYOCERA UNIMERCO manufactures, distributes and services tools for machining, primarily for the metal, woodworking, automotive, aerospace, power generation and fluid power industries. The technology centre in Lichfield focuses on effective solutions for production. The tooling concept comprises standard and customised tools, RE-NEW® tool maintenance, coating and optimisation guidance. The Sheffield branch specialises in supplying inserts, standard tools and related tool solutions to the industrial market in the UK, including the general machining, aerospace, offshore and medical industries.

The company was established in 1998, services all of the UK, and is part of the KYOCERA UNIMERCO group, founded in Denmark in 1964 and originally named UNIMERCO. In 2011, all activities were acquired by Japan-based KYOCERA. This has created an even stronger company with a larger range of products, a wide network of companies and distributors all over the world, and an ambitious growth plan.
