Tangential 90° End Mill with 4-Edge Inserts

MA90

NEW

Reliable, Stable, High Quality Machining with Extended Tool Life

Unique tangential 90° end mill design provides a large variety of machining operations

Newly designed inserts with grade PR18 series coating technology
High quality surface finish and excellent wall accuracy

Supports multi-functional machining such as 3D milling

Tangential 90° End Mill with 4-Edge Inserts

MA90

Original tangential 90° end mill with economical 4-edge inserts. New grade PR18 Series and unique insert cutting edge design creates high-quality machining with longer tool life

1 The MA90 tangential end mills provide a large variety of machining operations

Challenges

Conventional end mill
- Sudden fractures can cause damage to the holder
- Insert defects preventing use of all four corners

Tangential end mill
- Premature tool wear can quickly deteriorate the surface finish quality
- Poor wall accuracy

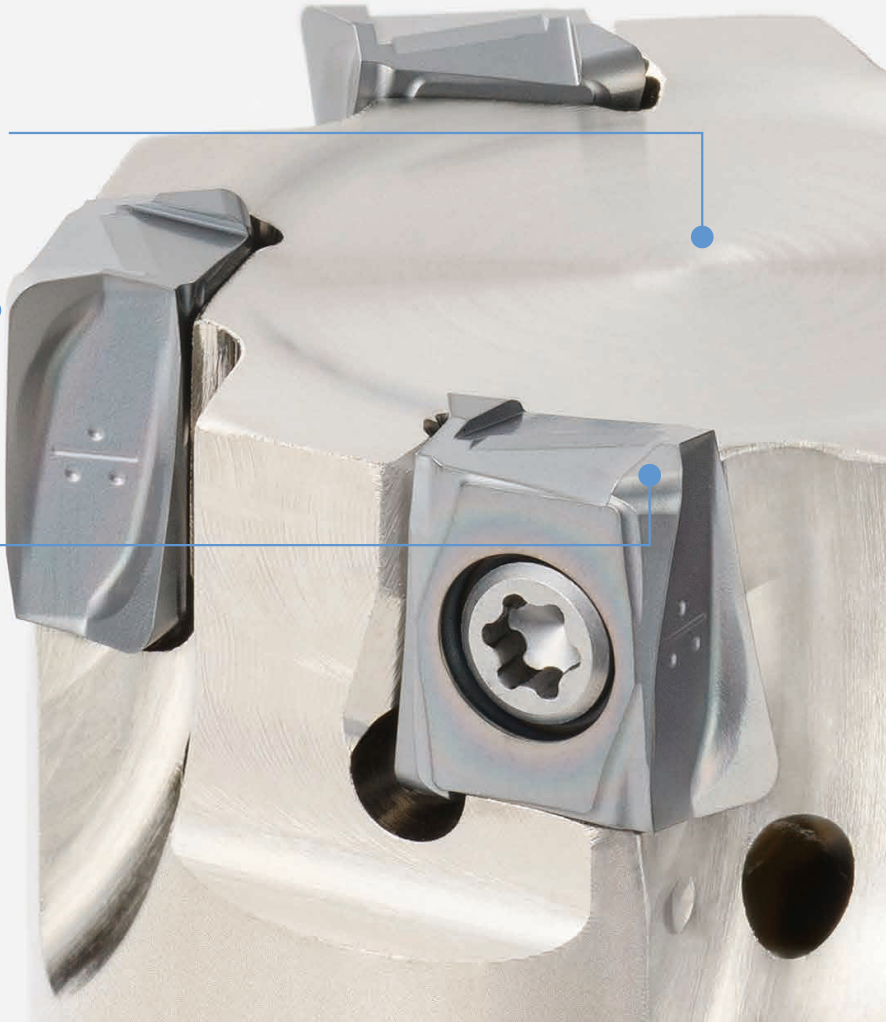
SOLUTION

Kyocera's MA90 tangential end mill solves these problems with a unique insert shape and PR18 Series grade technology.

Large web thickness
High rigidity

Peripheral grinding specifications
Excellent wall accuracy

Special wiper edge
Large relief angle suppresses wear
High-quality surface finish



Reliable tooling brings peace of mind to machinists.

Multifunctional (G-class insert)
Supports three-dimensional machining

Unique cutting edge design
Excellent fracture resistance and low cutting force design

Newly developed insert grade
MEGACOAT NANO EX
PR18 Series delivers longer tool life

2 New insert grade PR18 Series provides a significantly longer tool life

Next-generation insert grade for milling

NEW

PR18 Series

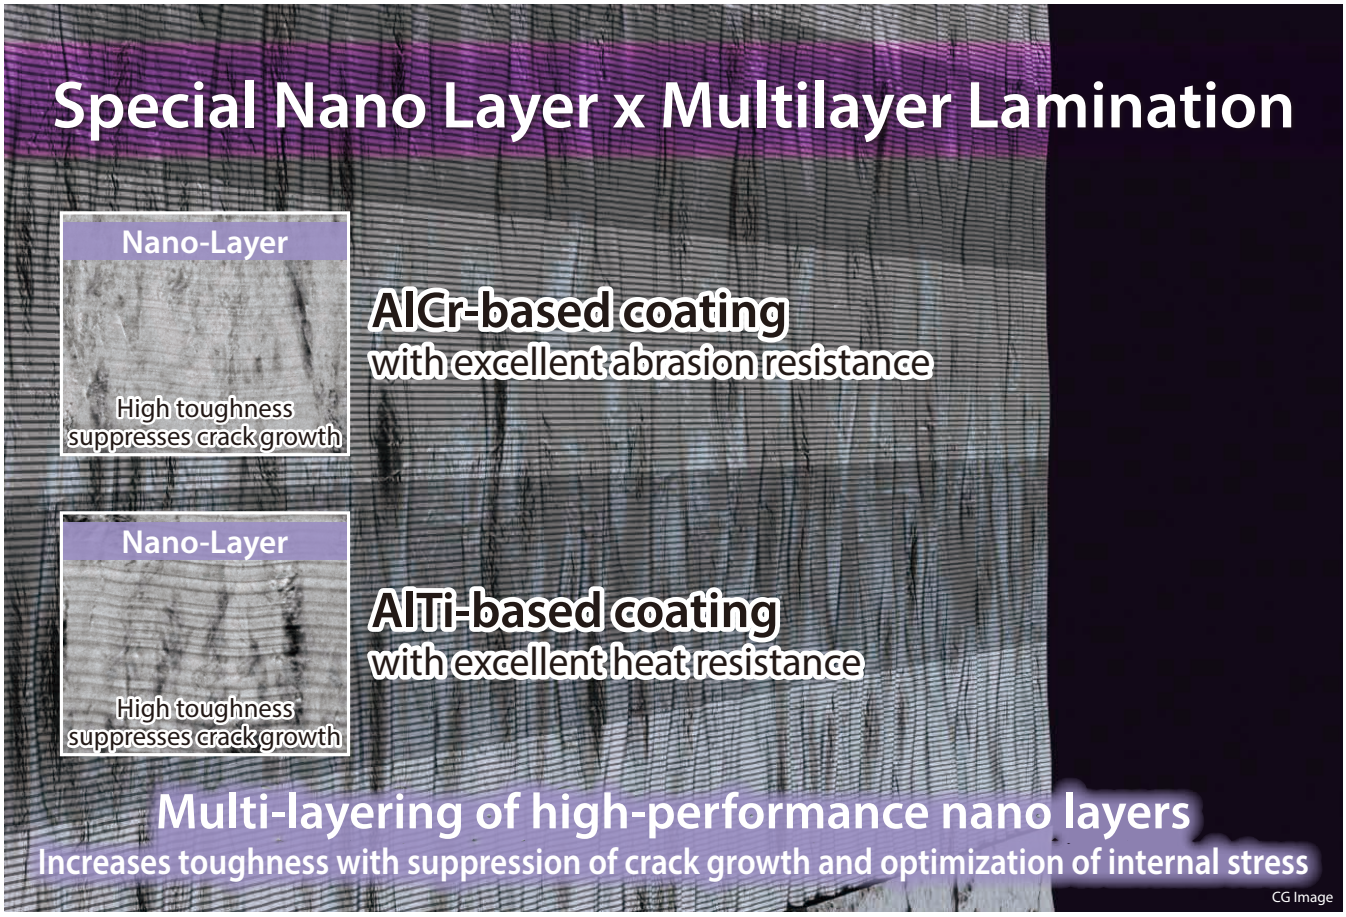
Kyocera's Nano Layer Coating Technology

Longer Tool Life with Next-generation Coating for Milling

MEGACOAT NANO EX | Milling

Double Lamination Technology Maintains Longer Tool Life

Multi-layer structure with two unique nano layers
Superior abrasion resistance and fracture resistance



Extensive lineup of insert grades covers a variety of machining materials and applications

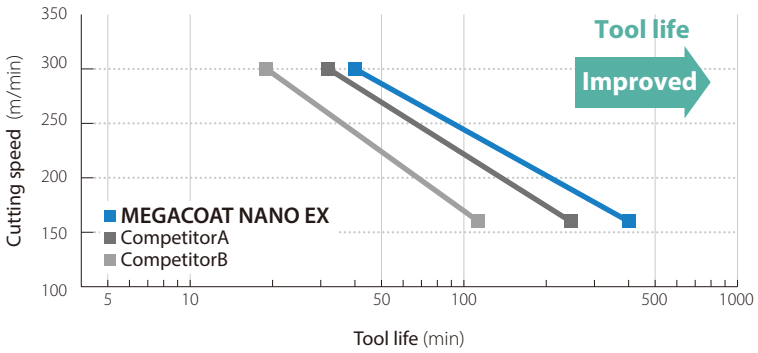
Workpiece material	P Steel					M Stainless steel					K Cast iron				
ISO	01	10	20	30	40	01	10	20	30	40	01	10	20	30	40
Lineup		1st recommendation PR1825					1st recommendation PR1835					1st recommendation PR1810			
		Wet PR1835					High-speed machining CA6535								

H Hardened material	PR015S (GH)	S Heat-resistant alloy	CA6535 (PR1835)	Titanium alloy	PR1835

PR1825 Wear resistance comparison (Internal evaluation)
V-T graph

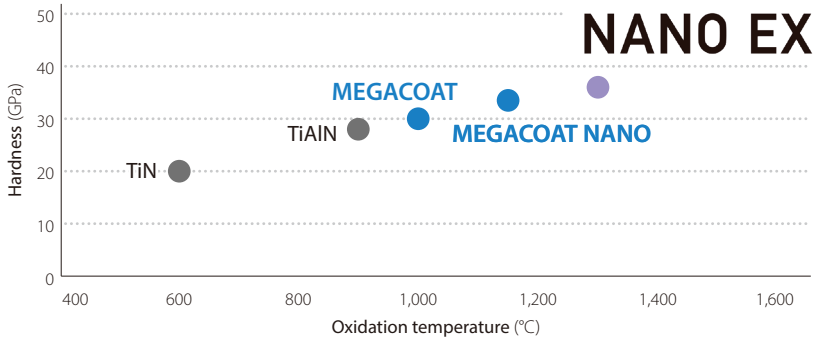
Life criteria:
Flank face wear = 0.10 mm

Cutting conditions:
Vc = **160** / **300** m/min
ap × ae = 2.0 × 110 mm, fz = 0.12 mm/t
SCM440 Dry
PNMU1205ANER-GM (MFPN)



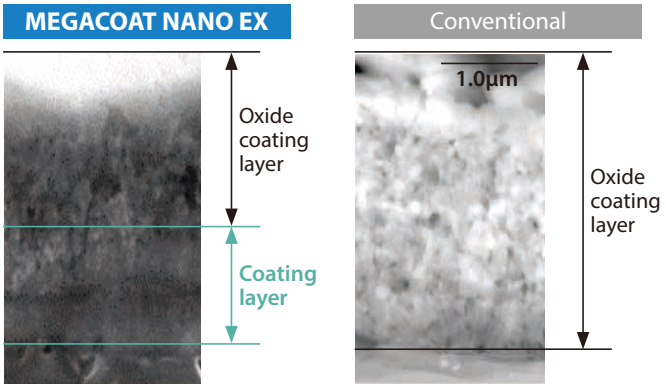
Coating characteristics (Internal evaluation)

MEGACOAT NANO EX | Milling



Oxidation progression comparison (Internal evaluation)

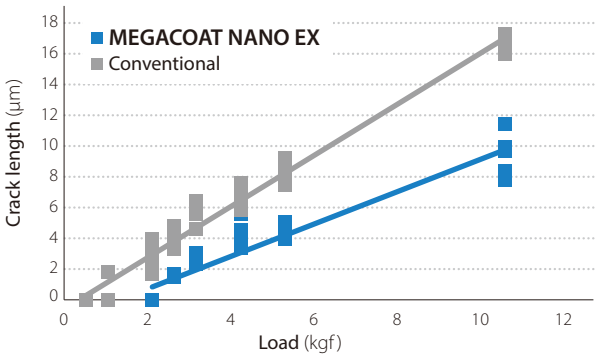
Suppresses oxidation progression with excellent oxidation resistance



*Section after holding at 1,200 degrees for 30 minutes in air

Coating layer toughness evaluation (Internal evaluation)

Excellent coating toughness with small crack length



*Micro-Vickers measurement

3 Achieve reliable results with an insert shape designed for high quality machining and long tool life

Unique cutting edge design delivers high fracture resistance and low cutting forces

Special wiper edge and peripheral grinding specifications provide high quality finish and long tool life

Advantage

Both the A.R. and the relief angle of the wiper edge are large.
Low resistance and excellent surface finish

MA90

Conventional tangential type

Unique cutting edge design

Superior fracture resistance and low cutting force

Special wiper edge

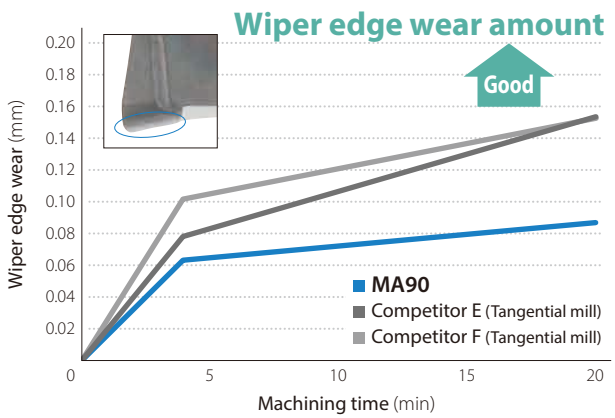
Large relief angle: Excellent surface finish and wear suppression
Stepped corners: Designed to prevent seat damage

Excellent — Excellent surface finish ›››

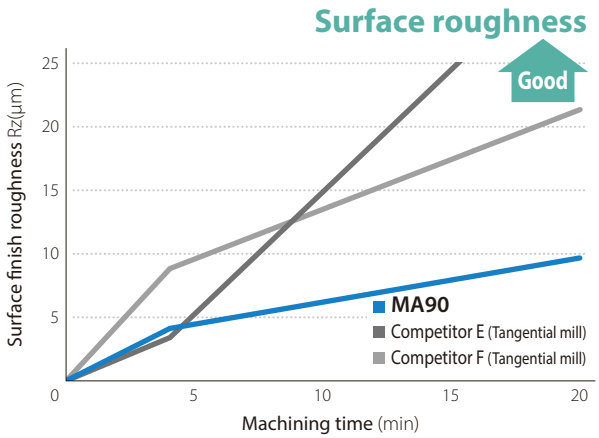
Special wiper edge design suppresses abrasion progress of the edge. Maintains high-quality finished surface

Wear and Surface Finish Comparison (Internal evaluation)

Wiper edge wear



Surface finish roughness (Bottom surface)



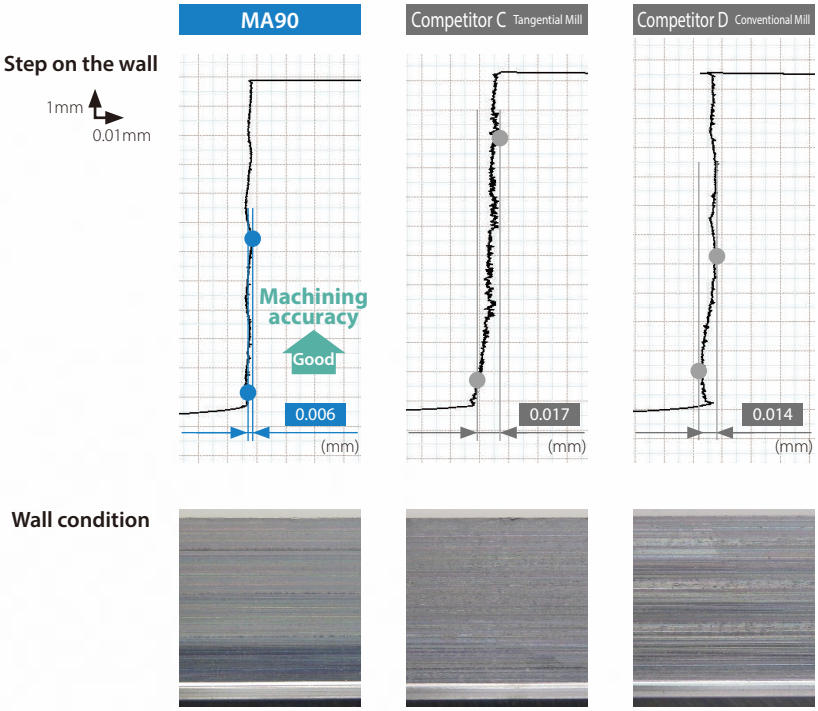
Cutting conditions: Vc = 200 m/min, ap x ae = 1 x 37.5 mm, fz = 0.1/0.12 mm/t, Dry S50C Φ50 (6/7 inserts) BT50

Excellent wall accuracy　Excellent

Peripheral grinding specifications

Unique, sloped, edge shape
Grounded peripheral provides higher precision

Wall accuracy comparison (Internal evaluation)



Cutting conditions: Vc = 150 m/min, ap x ae = 3 x 5 mm 4 passes, fz = 0.1 mm/t, Dry S50C Dia.20 (3 inserts) BT50

Long tool life and high-speed machining

Test 1 Even if the main cutting edge is in good condition, the tool reached the end of life due to deterioration of the finished surface. — MA90 ✓

Test 2 Machined with reduced cutting speed because the surface finish deteriorated early. — MA90 ✓

Edge condition and finished surface

Maximum number of revolutions

Set the number of revolutions per minute within the recommended cutting speed specified by the workpiece on Page 12.
Do not use the end mill or cutter at the maximum revolution or higher since the centrifugal force may cause chips and parts to scatter even under no load.

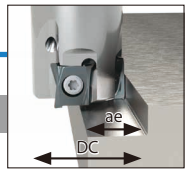
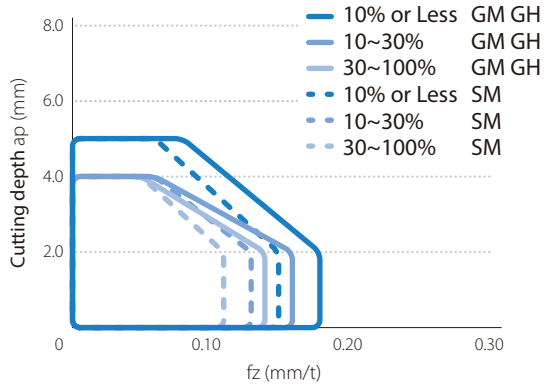
The number in bold font is recommended starting conditions. Adjust the cutting speed and the feed rate within the above conditions according to the actual machining situation.
Machining with coolant is recommended for Ni-base heat-resistant alloys and titanium alloys. When choosing wet machining for other workpieces, reduce the cutting speed to 70% or less.
Face milling does not recommend slotting or pocketing. We recommend setting the ae to 75% or less. We recommend the small number insert type for ae of 30% or more.
Working above recommended conditions or long-term use can damage the screws. It is recommended to replace the screws regularly.

Cutting Performance

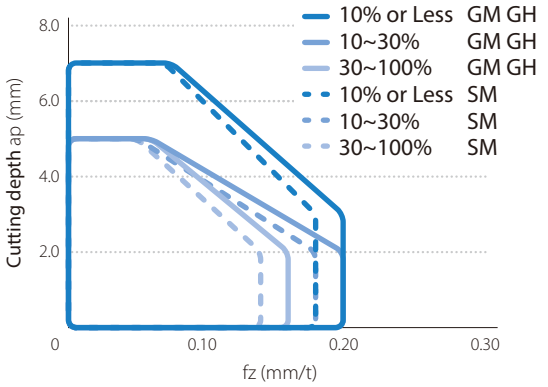


09 Size (LOGU09...) Machining for Steel (Dry)

Cutting Dia. DC : ø16 ~ ø18 ae/DC



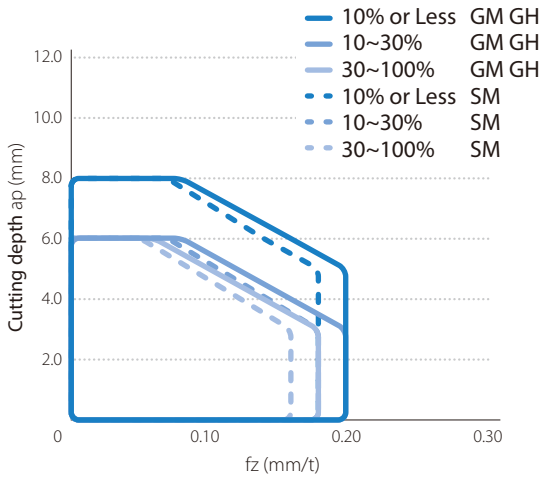
Cutting Dia. DC : ø20 ~ ø63 ae/DC



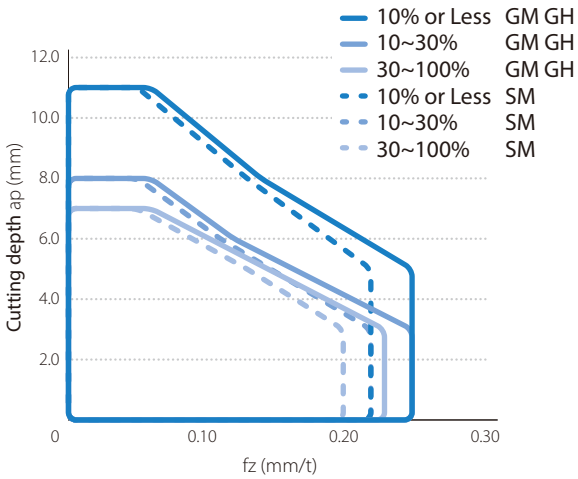
For other workpiece material, set ap and fz appropriately for each ae.

12 Size (LOGU12...) Machining for Steel (Dry)

Cutting Dia. DC : ø25 ~ ø30 ae/DC



Cutting Dia. DC : ø32 ~ ø125 ae/DC

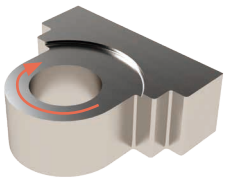


For other workpiece material, set ap and fz appropriately for each ae.

Case Studies

Brake parts FCD500

Vc = 135 m/min
n = 535 min^{-1}
ap x ae = 3.4 x 25 mm
fz = 0.15 mm/t
Vf = 560 mm/min
Wet
MA90-080R-12T7C-M
LOGU120616ER-GM (PR1810)



Number of Workpieces

Tool life

MA90 (7 inserts) **1,000 pcs**

x1.6

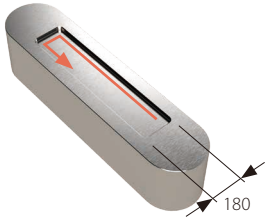
Competitor G (7 inserts) **600 pcs**

MA90 showed good cutting edge condition and stable machining. Achieved 1.6 times longer tool life.

(User evaluation)

Mold parts Stainless steel

Vc = 125 m/min
n = 1,600 min^{-1}
ap x ae = 1.0 x 25 mm
fz = 0.12 mm/t
Vf = 570 mm/min
Dry
MA90-25S20-09T3C
LOGU090408ER-GM (PR1835)



Machining efficiency

MA90 (3 inserts) **Q = 14.5 cc/min**

x1.5 Machining efficiency

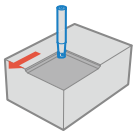
Competitor H (3 inserts) **Q = 9.5 cc/min**

MA90 showed 1.5 times higher machining efficiency than its competitors. Improved tool life (3 to 4 pcs)

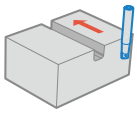
(User evaluation)

Notes

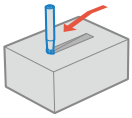
Applications



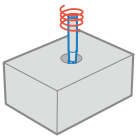
Face Milling & Shouldering



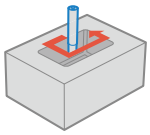
Slotting



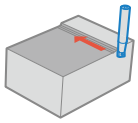
Ramping



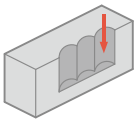
Helical Milling



Pocketing



Contouring



Plunging

Ramping Reference Table

Description	Cutter Diameter DC (mm)	16	20	25	32	40	50
MA… - 09 - …	Max. Ramping Angle RMPX	1.16°	0.97°	0.64°	0.4°	0.23°	0.11°
	tan RMPX	0.020	0.017	0.011	0.007	0.004	0.002
Description	Cutter Diameter DC (mm)	25	28	30	32	35	40
MA… - 12 - …	Max. Ramping Angle RMPX	2°	1.7°	1.6°	1.5°	1.2°	1°
	tan RMPX	0.034	0.030	0.027	0.026	0.021	0.017

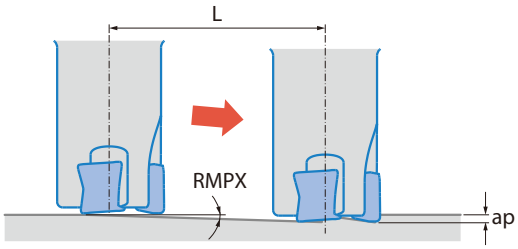
Decrease the angle of inclination when the chips extend longer.

Ramping Tips

Ramping angle should be under RMPX.
Reduce recommended feed rate by 70%

Formula for Min. Cutting Length (L) at Max. Ramping Angle

$$L = \frac{ap}{\tan RMPX}$$

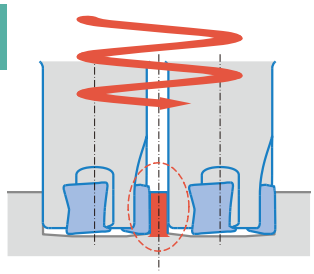


Helical Milling Tips

For Helical milling, use between min. cutting dia. and max. cutting dia.

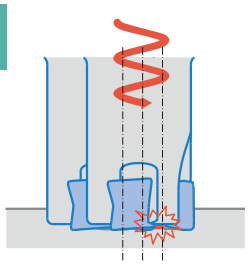
Exceeding max. cutting dia.

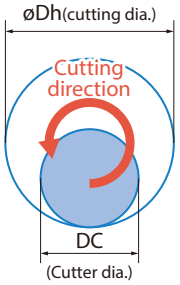
Center core remains after machining



Less than min. cutting dia.

Center core hits holder body



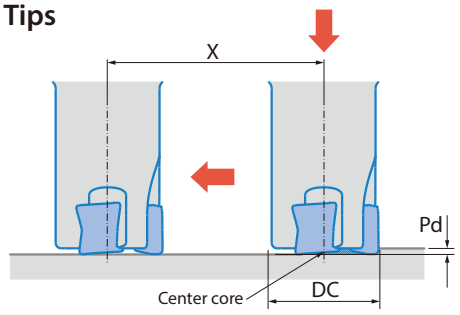


Units: mm

Description	Minimum cutting diameter øDh1	Maximum cutting diameter øDh2
MA… - 09 - …	2×DC-4	2×DC-2
MA… - 12 - …	2×DC-6	2×DC-2

For helical milling, use between min. cutting dia. and max. cutting dia..
The cutter direction should be counterclockwise (down cut) (see above).
Please machining in a safe environment as long chips may be produced.

Drilling Tips

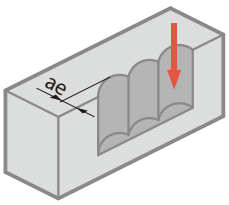


Units: mm

Description	Maximum drilling depth Pd	Min. cutting length X for flat bottom surface
MA… - 09 - …	0.25	DC-3
MA… - 12 - …	0.5	DC-5

It is recommended to reduce feed by 25% of recommendation until the center core is removed when traversing after drilling.
Axial feed rate recommendation per revolution is f = 0.1mm/rev or less when drilling.

Plunging Tips



Available for vertical milling (plunging)
Feed should be set within fz = 0.1 (mm/t) when plunging.

Units: mm

Description	Maximum width of cut (ae)
09 Size (LOGU09...)	2
12 Size (LOGU12...)	3

Tangential Cutter

Safe. Rigid. Quality Machining
